Figure S2. Maximum-likelihood tree of the 3′ half of COX1 (reference positions 719–1,130), all records covering at least 80% of the window, collapsed to haplotypes (Figure 4b).

Tips are haplotypes, labelled with their identifier, the accepted names of the records carrying them (number of records) and any anchor specimens; Table S7 lists the accession of every record. Numbers at nodes are ultrafast bootstrap values of at least 70. Columns as in Figure 4.
